NINA Configuration Guide

Environment

Settings map one-to-one to upper-cased environment names.
The dev environment uses SeaweedFS for S3-compatible storage.
Production reads the same keys from the deployment secrets.

Fetcher Limits

The body limit is fifteen megabytes read in streaming mode.
The total timeout is twenty seconds end to end.
At most five redirects are followed, each re-validated.

Rendering

Rendering is attempted only when the main text is too short.
A single page is given fifteen seconds to reach networkidle.
Every browser request is validated by the destination guard.
